

DPNR – MAIN CHAT UX UPDATE

MVP Refinement Guide for Rad & Claude

Purpose

This document defines UX/UI refinements to the existing DPNR Main Chat. The current Main Chat structure and functionality remain the foundation. The goal is to make the space feel more personal, alive and immersive while keeping the conversation clean, simple and central.

1. Main Chat Remains the Primary Experience

Do not redesign the existing architecture. Keep the current navigation, Main Chat functionality, quick-entry prompts, chat composer, Recent Conversations and existing DPNR routes. The conversation area remains the largest and cleanest area, using a soft glass treatment.

2. Personal / Default Chat Background

Introduce a customizable visual background. A new user receives a **default DPNR visual** and can later replace it with any personal image from their device.

Option A – Digital Twin: a sophisticated semi-realistic DPNR character inspired by the existing InnerSelf / Digital Twin language; human and present, but clearly system-created.

Option B – DPNR Environment: a calm atmospheric DPNR visual creating depth and presence without a character.

The background must adapt through blur, gradient, darkening and/or transparency so chat readability always comes first.

3. Profile Image

The top-right profile image remains separate from the Main Chat background and can be uploaded or changed by the user.

Profile image = identity. Chat background = environment / feeling.

4. Quick Conversation Entrances

Keep the four existing entrances: **Help me understand what I'm feeling** / **Help me see the pattern** / **Help me make a decision** / **Guide me based on what you know about me**. They are entry points into Main Chat, not separate features.

5. Chat Composer

Keep the existing composer, slightly more spacious and inviting. Maintain **Share anything with me...** plus voice input, image/file upload and send. Anchor it at the bottom of the conversation area.

6. Pull a Card / Today's Card

Keep Pull a Card directly accessible from Main Chat. Present it as a true visual card. Each question from the existing DPNR Pull-a-Card bank should have a different meaningful, dimensional and emotionally relevant image connected to its message. CTA: **Pull a New Card**. Do not create a new Pull-a-Card system; this is a UX presentation of existing functionality.

7. Music / Playlist

Add a small, non-intrusive **Focus Mode / Music** component. For MVP: current playlist/track, Play/Pause and a small music/settings control. Keep it secondary in the right panel.

8. Time on DPNR

Show today's platform time once, e.g. **12 min today**, preferably near the clock/profile area. Do not duplicate it with another large time widget.

9. Right Panel

Keep it lightweight. Recommended hierarchy: **Today's Card** → **Recent Conversations** → **Focus Mode / Playlist**. Main Chat should not become another Dashboard.

10. Left Navigation

Use the navigation architecture already implemented. Do not recreate or expand it based on concept images. Preserve existing routes such as Main Chat, Dashboard, Decision Room, Mirror Room, Content Library, Growth Tracker, My Evolution Map, My Profile and My Wallet. Avoid duplicate Settings, Rituals or Playlist items.

CRITICAL INSTRUCTION FOR CLAUDE

Treat the supplied concepts as UX/UI references, not new product specifications. Preserve the existing DPNR system, routes, functionality and data structure wherever possible. Implement only the refinements defined here.

Key changes: **personal/default chat background + stronger glass chat space + visual Pull-a-Card + profile personalization + one platform-time indicator + lightweight Focus Mode/music**. Everything else should continue to use what has already been built.

MVP principle: fewer elements, stronger presence. Main Chat should feel personal and immersive without becoming visually busy. The conversation remains the product.
